

CONTENTS

► SECTION 1: THE THEORY

01	THE BASICS	05
	How sound works – sound and electricity – mono and stereo – analog and digital – magnetic tape – multi-track recording	
02	GETTING CONNECTED	20
	Cables and connectors – balanced and unbalanced – inputs and outputs – gain and volume	
03	MICROPHONES	28
	Dynamic and capacitor – characteristics – pick-up patterns – construction – frequency response	
04	EQUIPMENT	36
	Audio equipment and studio setup – DI – effects – compression – preamplification – EQ	
05	MIXING IT UP	46
	What is a mixer? – mixing live sound – mixing recorded sound	
06	MIDI	62
	MIDI equipment – how MIDI works – MIDI sounds – hardware sequencing – software sequencing	
07	THE VIRTUAL STUDIO	70
	Computer production – setting up a DAW – creating a project – working with MIDI – working with audio	

► SECTION 2: PUTTING IT INTO PRACTICE

08	RECORDING	80
	Tracking – setting up software and hardware – techniques for recording instruments	
09	MIXING AND MASTERING	94
	Mixing: getting ready – a typical mix – polishing Mastering: exporting a stereo master file – tidying up – checking and distribution	
10	SEQUENCING	108
	Setting up a project – note entry – editing – musical shaping – setting up controllers – polishing – MIDI files and output	
11	ARRANGING AND COMPOSITION	118
	What is arranging? – getting started – sampling Composing using technology – getting started – working methods – composing with samples	
12	MUSIC TECHNOLOGY TIPS	128
	GLOSSARY	132
	INDEX	137
